

Support for Mission Critical

Achieve peak health and performance of your most important technologies and solutions

Mission Critical is a packaged, in-depth solution that is scoped specifically to your cloud services and business intelligence needs. With Mission Critical, you get access to a designated team of experts that deliver world-class support along with deep technical expertise, reducing downtime and driving performance in your solution while providing a superior response time.

Mission Critical takes the time to understand your solution, inside and out. As a result, we understand your people, business objectives, infrastructure, and future goals. We tailor our plans to meet your strategic vision.

Our programmatic, well-honed approach delivers proactive and reactive services across your team, processes, and technology. Preventative services include onboard assessments, onsite visits, and unlimited Risk Assessment Program (RAP) as a Service that help remove technical blockers. Should an incident response be needed, we offer elevated reactive support with an available 15-minute response time for Azure and 30 minutes for the rest of our solutions, delivered by a team that knows you and knows your environment.

By partnering to create the most stable environment possible, we aim to help you work smarter, resolve issues more easily, and become more productive. We also lay the groundwork for the digital transformation of your business, optimizing your mission-critical solutions so that you can innovate and capitalize on new opportunities.
